

As the Internet changes in its design and scope, the Jerome School District was looking for a product that would meet the needs of effectively teaching our students 21st century literacy skills, while offering the necessary protection from objectionable material. We found that solution in Lightspeed's "Total Traffic Control" and we found the perfect vendor in Nate Bondelid at Tek-Hut in Twin Falls, Idaho. Nate's knowledge of network systems and TTC software provided a customized solution for our district that was up and running in a matter of hours.

At all times Nate and the entire staff at Tek-Hut have been courteous and helpful with response times to questions unparalleled in the industry. This company is a perfect example of why schools should consider utilizing a "local" vendor. Their access and personal attention simply cannot be duplicated.
